Continuation Sheet (PTOL-303)

Application No.

Continuation of 3. NOTE: Applicants believe that the reference to Lin does not teach the claimed invention such as "multiple bias tabs" as recited in the claimed invention. Examiner traverses the argument. Even though there are two bias tabs recited in the claimed invention, they do not mean "two individual define structures" as indicated by applicant. According to the preamble in claim 1, "...two bias tabs for stabilization of said free layer, said bias tabs being comprised of a nonmagnetic layer, a ferromagnetic layer antiparallel coupled to a portion of said free layer, and a first antiferromagnetic layer adjacent to said ferromagnetic layer" as recited in lines 2-5 of claim 1. There is also no such a limitation in the claimed invention that the bias tabs are two individual define structures or a pair of tabs. Therefore, the examiner's position is that Lin fully satisfies this limitation. The two bias tabs of Lin et al. comprise a nonmagnetic layer, ferromagnetic layer and an antiferromagnetic layer. In addition, applicant argues that Lin does not teach the claimed invention such as "biasing layers coextensive with the free layer (track width)". Examiner also traverses the argument that there is no such a limitation in the claimed invention.
